Joseph Kordish San Antonio, TX | joe@unicornclouds.com | jkordish | in/jkordish

SUMMARY

Principal Site Reliability Engineer driving reliability, scalability, and cost efficiency for large-scale AWS/Kubernetes platforms. Deep in EKS, Terraform, GitOps, observability, and resilience engineering. Known for turning chaos into boringly reliable systems and coaching teams to do the same.

Core Skills & Technologies

- **Cloud & Orchestration:** AWS (EKS, Lambda, EC2, S3, RDS Serverless)
- **Automation & Configuration Management:** Terraform, Ansible, Helm, Packer, GitHub Actions
- **Containerization:** Kubernetes, Docker, Karpenter
- **Languages:** Rust, Python, Go, Shell scripting
- **CI/CD & GitOps:** GitHub Actions
- **Observability & Monitoring:** Prometheus, Grafana, CloudWatch, Container Insights, Fluent Bit, New Relic
- **Security & Compliance:** CISSP, FedRAMP, PCI-DSS, SOC 2, Vulnerability Assessments

Experience

Principal Site Reliability Engineer — Trellix | Jan 2022–Present

- Led strategic design of multi-region Kubernetes (AWS EKS) infrastructure, leveraging Karpenter and spot instances to optimize cost, scalability, and resilience.
- Developed and implemented a multi-cluster Kubernetes strategy across multiple AWS regions supporting IPv6, enhancing global service resilience.
- Applied chaos and resilience engineering practices, focusing on automated scaling and robust handling of spot instance terminations to ensure high availability and cost efficiency.
- Optimized CI/CD pipelines with GitHub Actions, Helm-based GitOps workflows, and Terraform-driven Infrastructure as Code, enabling rapid and reliable deployments.
- Implemented robust autoscaling strategies using Horizontal Pod Autoscaler (HPA) and Vertical Pod Autoscaler (VPA) to precisely allocate resources, minimizing over-provisioning.
- Championed adoption of serverless-first approaches, including AWS Lambda and RDS Serverless, significantly reducing operational costs and enhancing infrastructure elasticity.
- Fostered observability practices through actionable Service Level Objectives (SLOs), advanced monitoring, and alerting strategies using Prometheus, Grafana and CloudWatch.
- Drove automated testing (unit, integration, load, chaos) throughout the deployment lifecycle, improving reliability and predictability of production releases.
- Mentored senior and junior engineers, elevating organizational standards for reliability, automation, and engineering excellence.
- Developed and deployed numerous SRE-related CLI tools and AWS Lambda functions using Rust, significantly improving operational tooling and automation.

- Supported and contributed to achieving FedRAMP compliance, enhancing infrastructure security and governance practices.

Principal SRE — FireEye | Jan 2021–Dec 2021 (FireEye / McAfee => Trellix)

- Owned SRE practices for AWS production: container orchestration, CI/CD automation, and data pipelines; reduced incident load via capacity and retry policy tuning.
- Streamlined multi-tier AWS infrastructure, focusing on operational efficiency and incident mitigation.

Senior SRE — FireEye | Jan 2018–Jan 2021

- Migrated legacy services to EKS; deployment times significantly improved and change failure rate reduced through immutable releases and health-based rollout gates.
- Managed multiple AWS EKS clusters, ensuring robust security and compliance for mission-critical services.
- Expanded serverless patterns (Lambda) to offload ops toil and shrink blast radius for batch/ETL flows.

SRE — FireEye | Jan 2014–Jan 2018

- Redesigned and supervised the **CI/CD pipeline** using Ansible, Terraform, Packer, and Consul.
- Implemented a Big Data Analytics platform (EMR, AWS Data Pipeline, Lambda) to process large-scale ETL workloads.
- Created operational documentation, runbooks, and standard operating procedures for consistent deployments.

SRE — Mandiant | Jul 2013–Dec 2013 (Acquired by FireEye)

- Build CI/CD With Teamcity and Replaced brittle Bash deploys with Ansible playbooks; accelerated release cadence and reduced human error.

Senior Technologist — Trans-Tel Central | Apr 2012–Jul 2013

- Led PCI assessments; established repeatable compliance process for varied client stacks.

Technology Consultant III — Hewlett-Packard | Sep 2010–Mar 2012

- Senior virtualization engineer for USAMITC; managed **1,000+** VMs, automated routine ops with PowerCLI, improved platform uptime and throughput.

Computer Security Engineer — TASC Inc. | Sep 2007–Sep 201

- Designed VMware solutions for Air Force; rolled out first large-scale virtualization across commands; conducted enterprise vulnerability assessments.

Network Security Analyst — MacAulay Brown | Nov 2006–Sep 2007

- Real-time monitoring and IR for the Air Force GIG; partnered with AFCERT on critical incidents.

Information Protection Technician — United States Air Force | Oct 2000–Oct 2006

- Led a team of eight, implementing boundary protection, vulnerability assessment, and intrusion detection for the largest Air Force communications squadron.

EDUCATION

M.S., Information Assurance & Security (Network Defense), Capella University — 2016, Summa Cum Laude
B.S., Psychology, Capella University — 2015, Summa Cum Laude

Certifications

- **CISSP** – ISC2 License #112897
- **Network+** – CompTIA License #COMP10617900
- **Security+** – CompTIA License #COMP001004759650
- **CEHv6** (Ethical Hacking and Countermeasures) – EC-Council
- **ITIL V3 Foundation**
- **RHCSA** (Red Hat Certified System Administrator) – #605010315431388
- **MCTS**: Windows Server 2008 Active Directory
- **VMware Certified Professional 3/4/5** – License #24125
- **Linux Professional Institute Certification (LPIC1)** – (Expired)
- **Cisco Certified Network Associate (CCNA)** – #CSCO10432786 (Expired)

OPEN SOURCE / COMMUNITY

Rust Language Release Team Volunteer (2018–2020): testing, docs, community support.
